

POTASSIUM IODINE (K1 TABLETS)

As directed by Durham Region Health, K1 tablets are distributed and stored at all child care centres within a 10km radius of the nuclear plant. These pills will be stored with the main first aid kit at the kitchen in the main building and in first aid kits in all other buildings.

In the unlikely event of a nuclear accident, the K1 tablets prevent absorption of radioactive iodine into the body and will be administered upon authorization by Ontario's Chief Medical Officer of Health only.

Parents are aware of our supply and sign off on the registration form each year.
